Question 1: Club History

Gifford Pinchot:

- a) coined the term "conservation" meaning "wise use."
- b) was a B&C Club member and first head of the U.S. Forest Service.
- c) was instrumental in defining the proper management of our natural resources in good stewardship.
- d) all of the above.

Question 2: Category Boundaries

As a general rule, category boundaries are set so there is virtually no chance of a larger category specimen (or an interbreed) being taken within the boundary of the smaller category.

- a) True
- b) False

Question 3: Measuring Techniques

To be counted a point, a projection on deer, elk, and moose must be at least one inch long (without rounding up to an inch), with the length exceeding the width at one-inch or more of length.

- a) True
- b) False

Question 4: Measuring Techniques

Once a projection is established as a point:

- a) its length is then taken from the tip to the baseline of the point.
- b) the measurement is recorded in one-sixteenths of an inch.
- c) measurement is taken along the inside curve of the point.
- d) it can be recorded only in the typical category.

Question 5: Measuring Techniques

The only exception to the B&C point definition (see question 3) is in caribou, for which a point must only be at least one-half inch long (without rounding up) and longer than wide at a length of one-half inch or more.

- a) True
- b) False

Question 6: Entry Requirements

All bear and cat entries must be accompanied with clearly focused, close-up photo prints of the:

- a) front.
- b) left side.
- c) right side.
- d) top of the clean, dry skull.
- e) all of the above.

Question 7: Entry Requirements

Required photos of antlered, horned, or tusked game include all of the following views except:

- a) front.
- b) left side.
- c) right side.
- d) top.

Question 8: Rocky Mountain Goat

In regards to Rocky Mountain goats, all of the following are accurate except:

- a) The horns are black and their surfaces are generally shiny and smooth.
- b) Female goats tend to score higher than billies secondary to their massive circumference measurements.
- c) Only a 1/4-inch wide steel tape may be used for length and circumference measurements (no cables).
- d) Separation of horns from their cores does not preclude its measurement.

Question 9: Rocky Mountain goat

Which statement best depicts the correct method of horn length measurement in Rocky Mountain goats:

- a) the line of measurement is maintained along the inner curve.
- b) the line of measurement is maintained along the outside lateral edge.
- c) the measurement is started by hooking the measuring tape clip-end on the lowest front edge of the horn base.
- d) Goat horns normally end in a blunt tip to which one measures to the middle.

Question 10: Rocky Mountain goat

Rocky Mountain goat horn length measurement is maintained along the outer curve of the horn surface to a point in line with the horn tip.

- a) True
- b) False
