- b) as an account of our wildlife management successes
- c) as a record of quality habitat management
- d) as a platform to promote ethical hunting
- e) all of the above

## Question 2: Measuring Techniques

The use of a round, flexible, steel cable is acceptable for taking point and main beam length measurements on antlers (deer, elk, etc.) but not horns (sheep, pronghorn, etc.)

- a) True
- b) False

## Question 3: Measuring Techniques

A very accurate setup for measuring greatest spreads as well as skull lengths and widths, consists of two carpenter's levels with c-clamps affixed to one end to serve as bases, forming right angles.

- a) True
- b) False

## Question 4: Entry Requirements

The "entry affidavit for all hunter taken trophies"-

- a) is an important item required for any Boone and Crockett trophy entry
- b) attests to the "fair chase" harvesting of the submitted trophy
- c) must be read, accepted and signed by the hunter in the presence of the official measurer
- d) in lieu of "c" (above), the hunter may sign the entry affidavit witnessed by a notary of the public
- e) all of the above

## Question 5: Entry Requirements

FAIR CHASE, as defined by the Boone and Crockett Club, is the ethical, sportsman like, and lawful pursuit and taking of any free-ranging, wild, native North American big game animal in a manner that does not give the hunter an improper advantage over such game animals.

- a) True
- b) False

## Question 6: Sheep

In regards to measuring sheep, which of the following is false?

- a) only a ¼" wide steel tape may be used for measuring length and circumferences
- b) sheep cannot be measured if the horns are loose or off their cores
- c) outside spread serves as a supplemental data only
- d) the longer horn determines where the circumference measurements are taken on both horns

## Question 7: Sheep

The length of the horn measurement involves all the following except:

- a) it is started by hooking the clip-end of the measuring tape on the lowest front edge of the horn base
- b) the line of the measurement is then maintained along the horn surface to a point in line with the horn tip
- c) use a small carpenter's ruler (or credit card) to determine the end of the measurement line by forming a perpendicular of the square and horn axis at that point.
- d) The end measurement is to the middle of the broomed off horn tip

## Question 8: Pronghorn

The proper location for beginning the length of the pronghorn horn measurement is at the lowest outside edge of the serrated horn base.

- a) True
- b) False

## Question 9: Pronghorn

Nuances to pronghorn measurement include...

- a) the basic circumference (D-1) is measured at right angles to the base above the serrations and entirely on horn sheath material
- b) if the horn tip is blunt, use a credit card to finish length measurement
- c) measure across small protuberances if they do not noticeably affect the measurement
- d) make note of any protuberances exceeding one-half inch that interfere with the length of horn measurement
- e) all of the above
